

Shandong Jiju Aluminum Industry Co., Ltd. has over 17 years of experience in the aluminum industry. The factory has a complete production line equipped with 600 to 7000 ton extruder equipment, specializing in the production of various aluminum products.

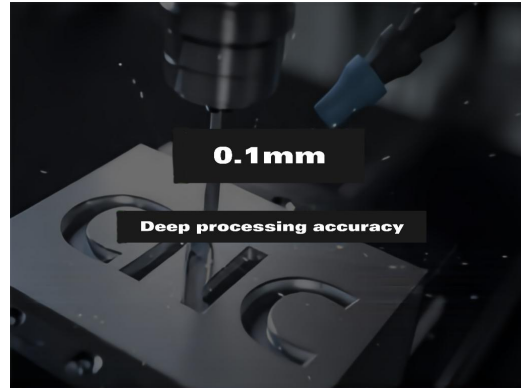

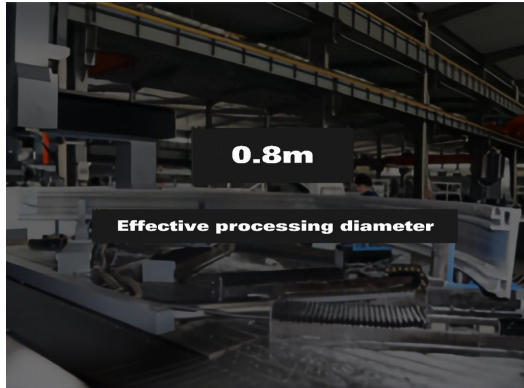

The factory can produce various large, medium, and small cross-section aluminum profiles, with mold cross-sections ranging from 10mm to 400mm, to meet customers' diverse customization needs.

Shandong Jiju Aluminum Industry is equipped with 16 high-precision CNC machining equipment. After the aluminum profiles are extruded, in addition to surface treatment, we can also perform some post-processing on the aluminum profiles, such as cutting, punching, tapping, milling, bending, slotting, stamping, CNC precision machining and other deep processing
